PROFESSIONAL SUMMARY

Computer Science student building hands-on experience in LLM systems, prompt engineering, and applied AI infrastructure. Self-hosted a multi-model LLM orchestration stack with Ollama, model routing across tiers, and a Telegram bot interface, alongside full-stack and backend work shipped at a fintech internship. Focused on deterministic, testable prompt design, latency-aware model selection, and reproducible evaluation over intuition.

EDUCATION

- Koneru Lakshmaiah University** Hyderabad, India
Bachelor of Technology - Computer Science & Information Technology August 2023 - Present

TECHNICAL SKILLS

- LLMs & Prompting:** Prompt Engineering, System/User/Meta Prompt Design, GPT, Claude, LLaMA, Qwen, Mistral, Ollama, GGUF / INT4-INT8 Quantization, Sampling Controls (temperature, top-p, top-k, seed), RAG & Embeddings (conceptual), JSON-Schema Outputs
- Languages:** Python, Java, C/C++, SQL, JavaScript, TypeScript
- Web & Frameworks:** REST APIs, Next.js, React, Flask, NumPy, PyTorch, OpenCV
- Databases & Infra:** PostgreSQL, MySQL, Docker, Raspberry Pi, Cloudflare Tunnels
- Automation & DevOps:** Git, CI/CD, Terraform, Test Automation, Bash
- Foundations:** OOP, SDLC, Agile, Debugging, Performance Optimization, Evaluation Mindset

EXPERIENCE

- BlueStock Fintech** Remote
SDE (Intern) May 2025 - June 2025
 - API Engineering:** Designed, tested, and deployed 5+ REST APIs backed by PostgreSQL, improving system reliability by 25% and tightening request/response contracts for downstream consumers.
 - Automation & DevOps:** Automated database backups and deployment workflows, reducing manual effort by 40% and standardizing release steps across environments.
 - Feature Development:** Shipped frontend, backend, and database features against business requirements, with tight iteration loops between specification and implementation.
 - Code Quality & Reviews:** Drove weekly peer reviews and bug-fix cycles, sustaining a 95% code quality bar and catching regressions before merge.
 - CI/CD Contributions:** Extended Git-based CI/CD pipelines on a live production system, integrating new checks without disrupting active deployments.

PROJECTS

- OpenClaw – Self-Hosted LLM Orchestration Framework:** Designed and deployed a multi-host LLM stack with a Raspberry Pi (*darkstar*) as the orchestration node and a separate GPU machine running Ollama for inference. Implemented model routing/tiering so that lightweight prompts hit small, low-latency models while complex prompts route to larger ones, trading off latency, cost, and quality. Exposed the stack to a Telegram bot front-end and over LAN, with secure remote access via Cloudflare Tunnels.
Tech: Python, Ollama, GGUF-quantized models, Telegram Bot API, Raspberry Pi, Cloudflare Tunnels
- Face Recognition – Real-Time Inference Pipeline:** Optimized an end-to-end CV inference pipeline for real-time performance, improving processing speed by 30% by profiling bottlenecks and tuning the pre/post-processing path. Practiced a measurement-first workflow: benchmark, change one variable, re-measure.
Tech: Python, OpenCV, NumPy
- Cipher Safe – Encrypted Password Manager (Full-Stack):** Built a full-stack password vault with encrypted-at-rest storage and in-memory decryption only on access. Hardened the key-handling path and kept the threat model explicit – what is encrypted, where keys live, when they are wiped.
Tech: React.js, MySQL, JavaScript, HTML, CSS
- Attendance Calculator – OCR-Driven Web App:** Web app that ingests a screenshot of an attendance page, runs OCR to extract values, and computes attendance scenarios locally with cookie-based persistence (no login required). Designed around input-validation edge cases and noisy OCR output.
Tech: Next.js, TypeScript, React, Tailwind CSS, OCR API

CERTIFICATIONS & CO-CURRICULAR ACTIVITIES

- AWS Academy Cloud Foundations:** Cloud computing fundamentals – AWS core services, security, architecture.
- Automation Anywhere:** RPA and enterprise automation workflows on the Automation Anywhere platform.
- Introduction to Operating Systems:** Virtualization, memory management, scheduling, and SDLC practices.
- ACM, IEEE & Blockchain Club:** 3+ hackathons across AI and cloud tracks; multi-disciplinary teamwork. (Sep 2024 - Present)
